Cookbook

HOW TO USE THIS COOKBOOK

Your Viking Convection Microwave Hood can be used as a microwave oven for quick, convenient cooking, as a convection oven for small baked goods and broiling or in combination for roasting and baking.

Your cookbook begins with an introduction to the principles and techniques of convection microwave cooking, then explains convection and combination cooking, and includes cooking methods, charts and recipes.

For some foods you will find directions for both combination cooking and microwave cooking. Your oven provides you with the option of using either method, depending on the time you have available and your own preferences. It is necessary to use the cookbook along with the Use and Care manual.

Take a moment to flip through the cookbook to see how it's arranged. As you use the book, be sure to read the captions under the pictures — often that's where you'll find important directions and tips.

PRECAUTIONS TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY

- (a) Do not attempt to operate this oven with the door open since open-door operation can result in harmful exposure to microwave energy. It is important not to defeat or tamper with the safety interlocks.
- (b) Do not place any object between the oven front face and the door or allow soil or cleaner residue to accumulate on sealing surfaces.
- (c) Do not operate the oven if it is damaged. It is particularly important that the microwave oven door close properly and that there is no damage to the:
(1) door (bent), (2) hinges and latches (broken or loosened), (3) door seals and sealing surfaces.
- (d) The microwave oven should not be adjusted or repaired by anyone except properly qualified service personnel.

What is Convection Microwave Cooking?

The convection microwave oven is the ultimate cooking team. This state-of-the-art system brings together the best of both worlds. Enjoy the browning and crisping capabilities of convection plus the speed of microwave cooking. Microwaving brings out the natural flavor of foods and keeps them moist and juicy. Convection cooking adds the advantage of browning and crisping food beautifully. Combination settings LOW MIX and HIGH MIX use convection heat to seal and brown the outside while using microwave energy to make sure the interior is cooked.

Breads and cakes are done to perfection; roasts and poultry brown and crisp just right. The results are superior to conventional methods, giving you the widest range of options for creative cooking and timesaving ease. It is not necessary to preheat with combination settings.

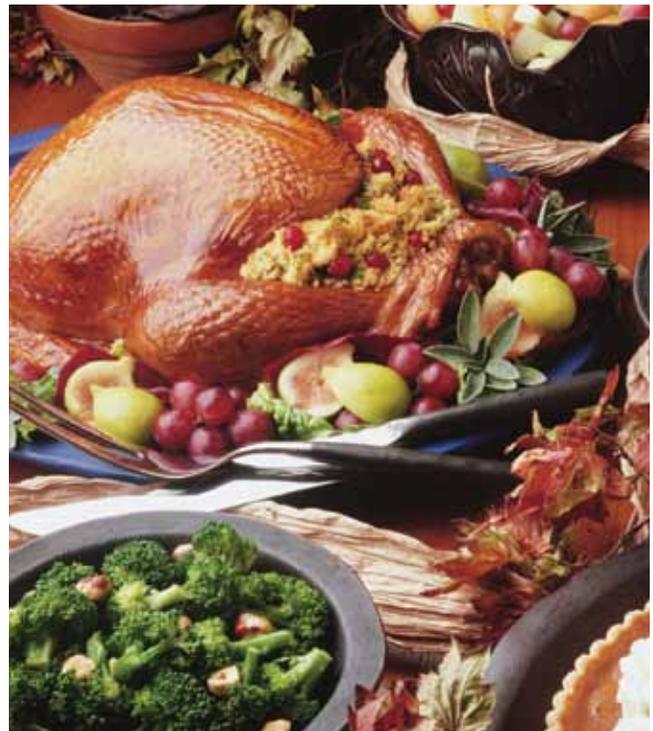

When you compare foods cooked in a convection microwave oven with those cooked conventionally, you'll discover the advantages of this advanced system.

Low Mix combines convection heat with microwave power for perfect baking results. Use the Low Mix setting for baked goods that require more than 20 minutes baking time. Angel food and bundt cakes, quick breads and yeast breads and large muffins are examples of foods that bake perfectly at this setting. Check the use and care manual for further information.

Turkey is an excellent example of the superb results you can achieve with this team. No turning over is needed, and you don't need to baste unless a special seasoning is desired. Turkey roasted conventionally browns well, but white meat often becomes dry in the time needed to cook dark meat completely. Combination settings use hot air roasting for crisp, brown skin plus microwaving speed for moist, juicy meat.

Breads and cakes also turn out beautifully. The convection microwave team bakes bread with golden brown, crisp crust and fine texture. Cakes are tender moist and evenly cooked with a nicely browned surface. You can also bake two layers at a time rather than the one-at-a-time method of microwave-only baking.

High Mix combines convection heat with microwave power, providing crisp brown exteriors and superior juiciness for meats. Longer-cooking foods, such as roasts, whole turkey and chicken and poultry pieces, cook in about half of the time with just the right amount of browning. Check the use and care manual for further information.

What is Convection Cooking?

With convection cooking, a high-speed fan circulates air past the heat source and around the food. The superheated air browns and crisps the food beautifully.

Convection cooking is ideal for foods requiring 20 minutes or less cooking time. Preheating is necessary with convection cooking. Two round sheets of cookies or two 6-cup muffin pans bake at the same time when using the high rack with turntable on. A rectangular cake pan, large cookie sheet or 12-cup muffin pan are ideal for convection baking on the low rack with the turntable off.

Use the convection setting for baked goods such as cookies, biscuits, cupcakes and small muffins or frozen or refrigerated convenience-food items.

What is Convection Broiling?

In convection broiling, food is elevated on the low rack, allowing cooking to occur on all sides simultaneously. Fats drip away from the food providing for great flavor.

Convection broiling is easier than ever with the unique one-step programming Convec Broil, which makes broiling even easier, with its automatic settings for hamburgers, chicken and steaks.

Foods and Best Cooking Methods

There's an easy way to cook each of your favorite foods. Matching the best method and setting to the food is the secret to success time after time. This chart keeps it simple by giving you the everyday guidelines you need. Now you

can tell at a glance whether it's best to use the Convection or Microwave only method, the Broil setting or combination cycles of LOW MIX/Bake or HIGH MIX/Roast.

Convection Microwave Utensils

A wide variety of utensils may be used in convection and combination cooking. Many of them are also suitable for microwaving alone. Microwave-only paper and plastic products should not be used for combination cooking or placed in the oven while it is still hot from convection cooking.

Be sure to use hot pads when handling utensils. They become hot from convection and combination cooking.

The turntable is an utensil itself: a drip pan under the low rack during roasting and broiling or a baking sheet for breads and cookies.

A meat/poultry thermometer may help you to determine doneness and assure you that foods have been cooked to a safe temperature. A conventional thermometer cannot be used with combination cooking, so it would be necessary to check doneness after food has been removed from the oven.

Low rack holds meat and poultry above the turntable so that heated air cooks all sides of the food and the fat drains onto the turntable for healthy cooking. Use the low rack for roasting, broiling, Convec Bake, Convec Broil and Convec Roast.

High rack serves as a shelf for two-level cooking, such as layer cakes or cookies. Use it for convection and combination cooking.

Metal and aluminum foil pans are safe for combination as well as convection cooking. During convection, heat transferred from the pan cooks the bottom and sides of food. During the microwave part of the cycle, energy penetrates from the top.

Oven glass is excellent for convection, combination and microwave cooking. Stoneware and pottery utensils may be used if they are also microwave-safe.

Glass ceramic (Pyroceram®) casseroles go from oven to table. They are microwave-safe and resist the heat of surface elements as well as ovens.

Thermoset® plastics are heat-resistant to temperatures of 425°F. as well as microwave-safe. They are sold as dual-purpose utensils and can be used. Do not use any other plastics for combination and convection cooking.

Roasting Techniques

Preheating the oven is not necessary for roasted meat and poultry. Place foods on low rack which holds meat out of its juices. You don't even need a pan because the turntable will catch the drippings. For moist, tender, perfectly done meat in a fraction of the conventional time, just season meat and place it in the oven and cook, following the temperature and time in chart on page 11 or use Convec Roast for whole chicken, whole turkey, turkey breast or pork loin.

Optional utensils are metal or foil roasting pans, oven-glass baking dishes or Pyroceram® casseroles.

Shield thin or bony areas of roasts or breast, wing tips and legs of birds to prevent overbrowning. Be sure foil does not touch rack or oven walls.

Roasting Techniques

To collect drippings for preparing gravy, place a microwave-safe dish below the low rack. When meat or poultry is done, remove and allow to stand covered while microwaving gravy in the same dish.

Gravy

- 2 tablespoons fat
- 1 cup cooking liquid or broth
- 1 tablespoon all-purpose flour

Pour drippings into measuring cup. Allow fat to rise to top; return 2 tablespoons to baking dish. Skim off remaining fat; discard. Add broth to make 1 cup. Set aside.

Blend flour into fat in baking dish. Microwave at HIGH (100%) until lightly browned, about 3 minutes. Stir in cooking liquid. Microwave at HIGH (100%), stirring several times, until thickened and smooth.

Check doneness after minimum time using a meat thermometer. Removal temperatures are listed on page 11. If meat is not done, cook 5 minutes longer and check again. Let stand, tented with foil, 5 to 10 minutes before carving.

Roast less-tender cuts of meat in heat-resistant and microwave oven-safe covered casserole or in oven cooking bag set in baking dish. Covering helps tenderize meat. You may also use the SLOW COOK setting. See use and care manual for programming instructions.

Broiling Techniques

Spray low rack and turntable with nonstick vegetable cooking spray for easy cleanup. Do not cover low rack with aluminum foil, as it blocks the flow of warm air that cooks the food.

Check chart, opposite, for maximum broiling time. Program oven for maximum time, on BROIL or 450°F., following directions in use and care manual. Season and slash fat at 1-inch intervals. When audible signal sounds that oven is preheated, quickly put food in oven. You may also use Convec Broil.

Cook for the minimum time recommended in the chart; then test for doneness. Time varies with the thickness or weight of meat and degree of desired doneness. Turning meat over is not necessary, as moving air cooks it on both sides.

Broil food in advance, if desired, then slice. Individual servings may be reheated as needed by microwaving at MEDIUM (50%), until warm.

Convection-Only Techniques

Convenience foods such as frozen appetizers, pizzas, egg rolls and refrigerated bread products bake and brown quickly with convection-only cooking. Two shelf cooking with the turntable on is perfect for two different foods requiring the same temperature.

Preheating the oven is necessary with convection cooking of smaller, faster-cooking food items that require less than 20 minutes of baking. Foods requiring longer baking time use **LOW MIX**.

Turntable off is used for larger cookie sheets, 12-cup muffin pans and rectangular cake pans. Use low rack with turntable off. Convec Bake uses the turntable off for all selections.

Two-Level Baking allows baking of two pans of cookies, small muffins or pizzas at the same time. Round baking pans are excellent cooking utensils for many convection-only items.

Cake Techniques

Rectangular Cakes. Use 13x9x2 baking pan and a mix or your own conventional recipe. Place pan on low rack. Use Convec Bake selection number 1.

Layer Cakes. Use a mix or your own conventional recipe. Use high rack and turntable to bake two layers at once. See chart on page 33.

Tube or Bundt Cakes. Do not preheat oven. Bake cakes for three-fourths of time on recipe or package directions using LOW MIX. Bake cake on low rack. If arcing occurs with fluted tube pan, place a heat-and-microwave-safe dish or plate between pan and low rack.

Angel Food. Do not preheat oven. Bake your recipe or a mix 25 to 30 minutes on LOW MIX or until crust is golden brown, firm and looks very dry.

Loaf Cakes or Quick Breads. Do not preheat oven. Bake for three-fourths of time on recipe or package directions using LOW MIX. Test for doneness at minimum time. If loaf is not done, let stand in oven a few minutes to complete cooking.

Pie Techniques

Pie Shell. Use mix, frozen pie dough or your recipe for single crust pie. Prick crust with fork. Preheat oven to 400°F. Place pie shell on low rack; bake with convection heat 8 to 10 minutes or until lightly browned. Cool and fill.

Custard Pies. Prebake and cool pie shell as directed on the left. Fill with uncooked custard. Without preheating, bake pie on round baking pan placed on low rack for 30 to 35 minutes on LOW MIX. If custard is not set, let stand in oven a few minutes to complete cooking.

Double Crust or Crumb Top Pies. Preheat pie as you would for conventional baking; make slits in top of two crust pie. Preheat oven to 375°F. Place pie on low rack. Bake double crust or lattice pies 25 to 35 minutes on *HIGH MIX, 375°F.; crumb top pies 20 to 25 minutes on *HIGH MIX, 375°F. (*Necessary to change temperature on HIGH MIX).

Frozen Prepared Custard-Type Pies. Preheat oven to temperature listed on package. Place pie on low rack. Bake three-fourths of package time using LOW MIX set at the package temperature. If filling is not set, let stand in oven to complete cooking.

Frozen Prepared Fruit Pies. Do not preheat oven. Bake on low rack. Use *HIGH MIX, 350°F. Bake 8-inch, 35 minutes; 9-inch, 40 to 45 minutes. (*Necessary to change temperature on HIGH MIX).

Bread & Baking Techniques

Proof dough. Use your own recipe or frozen dough. Place in well-greased bowl or loaf pan; cover with damp cloth. Place in oven at *SLOW COOK 100°F. 30 to 45 minutes. Frozen dough will take longer, 2 to 2¾ hours. Dough is doubled

when impressions remain after fingers are pressed ½ inch into dough. (*Necessary to change temperature on SLOW COOK.)

Preheating of oven is not necessary. Bake one loaf 25 minutes and two loaves 30 minutes at LOW MIX. After baking, bread should be golden brown and sound hollow when tapped. Do not let bread stand in oven; remove from pans immediately to cool on wire rack.

Braid or other shape. Remove turntable from oven. Shape bread; place directly on turntable. No preheating is needed. Bake for three-fourths of the time in your conventional recipe on LOW MIX.
