

GE APPLIANCES

ZONELINE® RAK180W1 Thermostat

SAVES UP TO 50% IN MAKEUP AIR ENERGY

OVER STANDARD PTACS WITH MAKEUP AIR, IF PAIRED WITH A GE APPLIANCES APPROVED OCCUPANCY SYSTEM.

The GE energy management thermostat provides remarkable energy savings through occupancy sensing technology. Zoneline Makeup Air (MUA) units have an EXCLUSIVE vent door technology that works with our EMS thermostat. The thermostat also works with verticals and built-ins providing guests or residents comfort and energy savings.

Applications

- Designed for MUA PTACS where MUA is operating with the vent door open, bringing in outside air. The vent door closes and de-energizes MUA for savings
- Direct application to all AZ45/65 models for energy management (8 pin t-stat connector)
- Thermostat is preprogrammed to GE Zoneline's proprietary preset settings to maximize comfort and savings. Thermostat power is wired or wireless capable, networked by purchasing the OLKIT-NTWK
- Applicable to:
 - Verticals (AZ75, 85, 90, 91)
 - Older PTAC's (AZ-29, 39, 41, 61)
 - Hotpoint PTAC
 - Heat/cool built-in models (AJE)
 - Non-branded GE products

What's included

- Thermostat with GEA face plate and cover (batteries NOT included)
- Control card (goes on PTAC)
- Prewired thermostat connector and MUA connector
- Thermostat power connector (for wired power option)
- T-stat mounting hardware
- Installation and set up instructions

Wired / Wireless Energy Management / Makeup Air Thermostat
